

FOR IMMEDIATE RELEASE:

**Evaluation systems for new IGBT switch driver technology**

Malvern PA – September 14, 2011

To our friends in the industry,

CogniPower is pleased to announce the immediate availability of evaluation systems for our new IGBT switch driver technology. This new technology leverages CogniPower's patented FET switch driver technology. Speed and power ratings are 3 to 8 times greater than competing products. The offering is suited for the Econo-Dual style package. The system is modular, to facilitate rapid expansion of the product line and to provide a high degree of flexibility to suit each customer's requirements.

Evaluation systems are rated for up to 1,700 volts. (Contact us if you require an evaluation system for up to 3,300 volts.) CogniPower will install gate enhance and deplete resistors to your specifications and will custom set the dead time for half bridge operation to your requirements at no additional cost.

To order an evaluation system, call us at 215-817-2269 to discuss your specific application and how CogniPower's switch driver technology can address your present and future needs.

Sincerely,  
Tom Lawson

**CogniPower** is committed to building better, more efficient power products by re-examining accepted wisdom regarding power converters in the light of new control technology, improved components, new semiconductor process technologies, and changing economics driven by energy cost and availability.

Our robust and growing patent portfolio will be the basis for fundamental improvements in how effectively and efficiently power is transformed and used, in other words, "**power smarter.**"
